

# We Make Solar Simple

TCEC members now have a simple, affordable option for renewable energy.

1

The sun.

2

Members purchase one or more panels, each sharing the benefits of one local installation without having to install and maintain solar panels on their roof or property.

3

Members will receive a credit on their bill for the energy produced by the array. Community solar also benefits our members as a whole because it reduces power costs for peak demand from our wholesale power suppliers.

For more details, call us today or visit our website.
